

ENVIRONMENTAL STATEMENT OF INTENT

As Chairman of CEG, I am able to confirm that the Company is working towards establishing an Environmental Management System that meets the requirements of ISO 14001 *and the European Eco Management and Audit Scheme (EMAS)*. Through this we aim to ensure that the Company makes a contribution to a sustainable and healthy balanced environment. Our primary objectives are as follows:

- To broaden awareness about wider environmental implications of materials used.
- To minimise noise and pollution arising from our works.
- To discourage smoking in the workplace.
- To encourage recycling of materials and thereby reduce the waste stream.
- To minimise the use of unsuitable chemicals and ensure proper handling of hazardous materials.
- To encourage the use of environmentally friendly fuels for transport and heating.
- To improve facilities for people with disabilities

Procedures are being developed to ensure that the company:

- Implements, maintains and improves its environmental management system.
- Assure itself of its conformance with this policy.
- Can demonstrate conformance.
- Ensures compliance with environmental laws and regulations.
- Can seek certification of its environmental management system by an external third party organization.
- Makes self-determination of conformance.

It is a mandatory requirement, on all staff, employed by the Company, to make themselves aware of environmental issues so that they individually and collectively make a contribution to these objectives.
